Minor Neuroscience

Professional Summary

Software developer with a passion for learning software development and technology. Team oriented and an ambitious problem solver that wants to be challenged daily in a position with long term growth opportunity. Prior experience in the neuroscience industry, provides a unique blend of experience within the medical technology field.

Professional Experience

AssureCare LLC

Jan 2020 – Present

Software Developer

- Assisted in the SDLC from designing of features and building requirements to developing and making sure the features were successfully deployed to their release
- Developed and maintained full features that were heavily relied upon by our clients, some of which required integrating our app with their software
- Joined various client discussions as a technical point of contact to help discuss the management/development of current features
- Led various personal projects within the app to reduce tech debt by updating parts of our code base to be more in line with modern day coding practices and following principles such as OOP
- Reviewed teams' pull requests for code quality and specifically was one out of a few developers designated as a required reviewer for our Angular code. Angular pull requests approved by me were able to go to production.
- Created and implemented code for unit testing our software to help streamline the process and aid in increasing code coverage for our codebase

Tech Elevator Capstone

Workout Companion App

- Developed a workout companion app that allowed users to check in and out of a gym and log their workouts on a machine. Users were able to view their previous workouts logged to see their progress. Gym employees were able to check users in and out and search users to view their workout log to plan future workouts, view overall machine usage, and add/remove machines on the site

Evokes LLC

Sept 2015 – Sept 2019

Neurotechnologist

- Served alongside the operating teams of various hospitals assisting surgeons to offer a higher level of patient care
- Tasked with assessing the patient's nervous system by monitoring their nerve potentials real-time during the surgery and alerting surgeons of any possible negative changes to the patient while they operate
- Aided surgeons by giving active feedback during critical portions of surgery to ensure the procedure was being performed correctly
